

Fujifilm X-A1: The latest addition to Fujifilm's X series of interchangeable lens camera has a 16MP APS-C sensor. It uses Fujifilm's EXR II processor that delivers fast response time, minimum shutter lag and a quick boot time. Weighing just 330 grams, the X-A1 features a 3-inch tilt rear display along with intelligent flash (it automatically regulates amount of light depending on the scene). There are various filters, multiple exposure modes and simulation modes available for the user to add special in-camera effects. Other features include full HD video recording, built-in WiFi, mini HDMI and a 350 photo battery life. Price includes a 16-50mm lens.
